Folder Structure

```
TechVerse-Academy/  
|  
├─ index.html  
├─ about.html  
├─ courses.html  
├─ course-details.html  
├─ instructors.html  
├─ blog.html  
├─ gallery.html  
├─ faq.html  
├─ contact.html  
├─ css/  
|   └─ style.css  
├─ images/  
└─ icons/
```

How to Build (Do NOT skip)

1. Create the folder structure.
2. Create all HTML pages first.
3. Design the Header and Footer.
4. Copy the same Header/Footer to every page.
5. Complete one page at a time:
 - Home
 - About
 - Courses
 - Course Details
 - Instructors
 - Blog
 - Gallery
 - FAQ
 - Contact
6. After HTML is complete, create `style.css`.
7. Style Header and Footer first.

8. Then style each page section by section.
9. Add Flexbox and Grid where appropriate.
10. Make the website responsive using media queries.
11. Test navigation links and responsiveness on every page.
